

Plynlimon Research Catchments in Virtual Reality!

Experience
stunning virtual
reality and on-site
360-degree
video with
researchers

- 🌿 Plynlimon is one of the UK's longest-running landscape-scale experiments, established in 1967
- 🌿 Sited across *two* freshwater catchments that form the source of the mighty River Severn in the Cambrian Mountains of mid-Wales
- 🌿 Compares the impact of different land uses (forestry and farming) in the two catchments upon river ecology and hydrology
- 🌿 Managed by the UK Centre for Ecology and Hydrology at Bangor

Get a bird's eye
view of each
catchment in a
